Seven Goals for San Francisco's Sewage System Master Plan

- Redress the environmental injustices created by the last Master Plan;
- Continually and significantly reduce Pollutant loading to the Bay and Ocean;
- Minimize the volume of water entering the system for treatment;
- Build in reliability and flexibility into the system in order to respond to catastrophic events and address water supply issues;
- Provide environmental benefits;
- Take proactive steps to address the impacts of climate change; and
- Achieve economic and environmental sustainability.
